NovaGrid AI — Series A Pitch Deck

About Us

NovaGrid AI builds predictive-maintenance software for industrial IoT fleets, using sensor data and machine learning to flag equipment failures before they happen. We are raising a $4M Series A to expand our sales team and accelerate product development.

Traction

Our Monthly Recurring Revenue (MRR) has grown to $50,000 as of this quarter, up from $22,000 a year ago. Annual Recurring Revenue (ARR) now stands at $600,000. We serve 34 mid-market industrial customers across North America and Europe.

Market Opportunity

We estimate our Total Addressable Market (TAM) at $12,000,000,000. Our Serviceable Addressable Market (SAM) is $1,800,000,000, focused on mid-market manufacturers in North America and Europe. Our near-term Serviceable Obtainable Market (SOM) is $90,000,000, representing realistic penetration over the next three years given our current go-to-market capacity.

Team & Financials

The founding team has previously scaled two industrial SaaS companies to acquisition. Our current Burn Rate is $45,000 per month, and we maintain a Cash Balance of $540,000, giving us a healthy runway to hit our next milestones. We believe our capital efficiency and enterprise-grade reliability make NovaGrid AI a compelling Series A investment.

Competitive Landscape

Compared to legacy SCADA vendors, NovaGrid AI offers a modern, cloud-native architecture with 10x faster deployment times and predictive (not just reactive) alerting.
